Customer Specified Kits

As Western's Pit Gauge Product Series gains popularity, we regularly address specific customer needs. We already offer Pit Gauge Kits tailored to specific Industry needs, such as the Vessel / Pipeline Inspectors Kits or Cylinder Inspectors Kit. We have customer's specifying Kits for their own needs. Below is an example of a Kit Designed by one of our Customers, Mountain West Services. Mountain West not only provides API Inspections (Vessels, Piping and Tanks), they also do extensive work in Pipeline Integrity.

One of Mountain West's principles outline their need for a Pit Gauge Kit, to suit their needs and thus the N88-MW-M, Magnetic Mountain West Pit Gauge Kit was specified. The N88-MW-M Pit Gauge Kit consists of;

- Imperial Dial Indicator (w/#1 Contact Point).
- Basic + Magnetic Blade (w/2 Magnetic Cartridges).
- Reaching + (Plus) Magnetic Blade (w/2 Cartridges).
- Accessories;
 - 1 x Spare #2 Contact Point.
 - 2 x Spare #1 Contact Points.
 - 1 x Spare #3 Contact Point.
 - 2 x Spare Magnetic Cartridges.
 - 1/8" Allan Key.
 - 1/4" Allan Key.
- Wooden Storage Case.
- Instructions.
- Calibration Certificate.

When Mountain West ordered multiple N88-MW-M Kits, they also included a Pit Gauge Calibration Block

(N88-FBH), to ensure their Pit Gauges are linear, over their full range. While Mountain West specified our standard Analog Imperial Dial Indicator (N88-I), they could have specified a Metric Dial indicator (N88-M), or our Digital Indicator Upgrade (N88-D). When a Digital Upgrade is ordered, Pit Gauge Kit Accessories will include a Spare Battery as well.

If you don't see one of our existing Kits, that suits your specific needs, then give us or one of our factory trained Stocking Distributors a call. We'll be more than happy to save you a few dollars by assembling your own Pit Gauge Kit and give you all the versatility you need for either Corrosion, Equipment, or Weld Inspection. Let us assemble an Inspection Kit for you today.
