

Dry Method Powders

Western Instruments Packages Dry Method Media (Dry Powder, Dusting Powders) primarily for use in our various forms of MPI Yoke Kits. Western offers 4 different colors (White, Blue, Red, & Yellow) of powder, to ensure maximum contrast with the Workpiece. In North America Dry Powders are used extensively in less stringent applications, as it is very easy and fast to apply. In other areas of the Globe, Dry Method Inspection is simply not permitted, requiring the use of Wet Method Media.

When replacing spent powders, one must ensure the correct size of container is ordered. Kit containers are either 400g (0.8 Pounds) or 800g (1 ¾ Pounds). Many End Users will use larger volumes of Powder, so Western offers larger containers, namely; 2.3kg / 5 Pounds, 4.5kg / 10 Pounds, 11.4 kg / 25 Pounds, and 22.7kg / 50 Pounds.

As Western is not a manufacturer of Inspection Media, do not look to us for excessively lower prices. We offer proven quality, in repeatable packaging.
